Patients should fast at least 2 hrs prior to their scan. Fee for FibroScan including CAP is \$140-150 (depending on location), payable by cash, credit card, or debit. We will contact your patient directly with their appointment. Bookings also available online at www.liverscan.ca.

For questions, call 416-268-0150 or visit www.liverscan.ca.

Revolutionizing Liver Health Assessment

Providing rapid access to FibroScan® technology to screen and monitor liver disease

At Liver Scan Direct we specialize in the assessment of **liver health** using FibroScan® technology. FibroScan®, is a non-invasive device that measures **liver stiffness** and **fatty infiltration** of the liver.

Our team of experienced technicians is overseen by a hepatologist to ensure accuracy.

We provide a report for each exam by our physician with interpretation and recommendations.

Liver stiffness measurement may predict the risk of complications including liver failure, the need for transplantation, and liver cancer.

Fatty liver affects 20-30% of the population and may cause liver cirrhosis.

Our mission is to provide patients and their healthcare providers **rapid access** to FibroScan® technology to screen and monitor **liver disease**.

We are based in **southern Ontario** and collaborate with health partners **across Canada**.

FibroScan® is the gold standard non-invasive solution for comprehensive management of liver health.

It is recognized worldwide as the non-invasive gold standard solution for liver fibrosis and liver steatosis assessment with more than 4 200 peer reviewed publications.
